Art Unit: 1743

Application/Control Number: 09/866,391

DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- 1. Claims 1 8, drawn to a method for controlling an electroplating process, classified in class 700, subclass 263.
- 2. Claims 9 13, 15 22 & 24 26, drawn to a method for providing closed-loop control for a coating process, classified in class 700, subclass 263.
- 3. Claims 27 34 & 101, drawn to a method and apparatus for automatically configuring control parameters for controlling the operation of a deposition chamber, classified in class 438, subclass 584.
- 4. Claims 35 45, drawn to a method for constructing a sensitivity matrix for use with an electroplating chamber and a computer memory containing a sensitivity matrix related to a deposition chamber, classified in class 700, subclass 266.
- 5. Claims 60 66, drawn to a method for controlling an electroplating process, classified in class 148, subclass 518.
- 6. Claim 67, drawn to a method for evaluating a design for an electroplating reactor, classified in class 700, subclass 97.
- 7. Claims 68, 69 & 71 73, drawn to an apparatus and method for automatically selecting or configuring parameters for use in controlling the operation of a deposition chamber, classified in class 700, subclass 263.

Art Unit: 1743

8. Claims 88 – 90, drawn to a method for constructing a library of deposition process parameter sets for use in controlling a material deposition tool, classified in class 700, subclass 253.

- 9. Claims 94 & 95, drawn to a computer memory containing an electroplating current data structure, classified in class 148, subclass 518.
- 10. Claim 96, drawn to a method for automatically configuring control parameters for use in controlling the operation of a reaction chamber in an electropolishing process, classified in class 700, subclass 266.
- 11. Claims 99 & 100, drawn to a method for electroplating a microelectronic workpiece, classified in class 700, subclass 253.

The inventions are distinct, each from the other because of the following reasons:

Each of the inventions are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, each of the different inventions either have different modes of operation, effects or functions. For example, the method of invention 1 utilizes a Jacobian sensitivity matrix during operation. Whereas the method of invention 2 does not specifically require this type of sensitivity matrix. The method of invention 5 is directed to a method of controlling an electroplating process. Whereas the method of invention 6 is directed to a method for evaluating an electroplating reactor design.

Because these inventions are distinct for the reasons given above and the search required for each of the groups is different, restriction for examination purposes as indicated is proper.

Application/Control Number: 09/866,391

Art Unit: 1743

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brian J. Sines whose telephone number is (571) 272-1263. The examiner can normally be reached on Monday - Friday (11 AM - 8 PM EST).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jill A. Warden can be reached on (571) 272-1267. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
